

TITLE: GROCERY SELECTION AGENT

Identify your problem in the context of Agent

Choosing grocery items can be difficult when a user has different needs and a limited budget. The problem is to develop an agent that helps the user select suitable grocery items based on their category, quality and budget. This will make the grocery selection process easier for the user.

Problem formulation by textually and graphically

Perception:

The agent receives the user's preferences and matches them with the predefined rules.

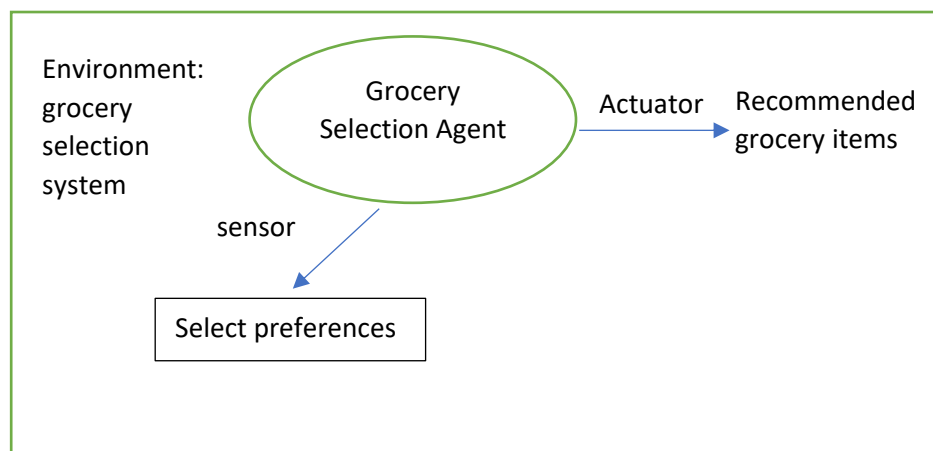

Reasoning:

The agent checks the user's preferences and matches them with the predefined rules.

Rational action:

The agent selects and recommends suitable grocery items based on the matching rules.

Graphically:

PEAS Framework:

P (Performance Measure) : suitable recommendation, user preferences matched, budget friendly selection.

E (Environment) : grocery selection system, available grocery items.

A (Actuator) : Recommend grocery items.

S (Sensor) : Category, Quantity, Budget

Identify the environmental properties of your agent

- ❖ Fully Observable
- ❖ Deterministic
- ❖ Episodic
- ❖ Static
- ❖ Discrete
- ❖ Single Agent
